

Epic Super Hybrid Composite

Product Name: Epic Super Hybrid

Product One-liner: Driver DNA In A Hybrid

Product Intro:

A hybrid with the DNA and technology of a driver, we like the sound of that. This is the new Epic Super Hybrid, better known as the most technologically advanced hybrid we've ever made.

Epic Super Hybrid borrows key design and construction elements from our award-winning Epic Drivers. A proven and powerful foundation of an all-titanium A.I. designed Flash Face, titanium body, and triaxial carbon crown.

We have also incorporated several ground-breaking hybrid technologies. Our Jailbreak A.I. Velocity Blades stiffen the body, allowing the face to flex for even more ball speed and the addition of extreme tungsten weighting (up to 90 grams) located toward the perimeter of the club create a potent combination of low CG and high-MOI for a high, powerful, and stable ball flight.

Like a driver, Epic Super Hybrids are outfitted with total adjustability from our OptiFit 3 hosel, while offering adjustable sole weighting for precise custom builds. The new Epic Super Hybrid includes expanded loft offerings for a wider range of golfers with the addition of the 24° and 27° models.

Features + Benefits

Epic Speed, Spin Robustness + Easy Launch

This is our fastest ball speed hybrid and there's simply nothing else like it. That's because we've developed an all-titanium Flash Face, along with a titanium body and combined them with our Jailbreak A.I. Velocity Blades. Epic Super Hybrid delivers exceptional ball speed, distance, and launch.

High Launch, High MOI

There's an extreme amount of tungsten weighting (up to 90 grams) split to the perimeter of the club; this provides increased stability, more forgiveness, and a hot penetrating ball flight.

Total Adjustability

We've provided complete adjustability with our lightweight OptiFit 3 Hosel, helping you dial in the ball flight and launch that you want to see. The addition of adjustable sole weighting allows for precise custom builds.

Components Package

Stock Shafts: Steelfiber FC Hybrids (60/70/80). Lamkin UTx (52g) grip.

**Weights indicate weight class.*
